CDC Doctor: ‘Disastrous’ Flu Shot Is Causing Deadly Flu Outbreak
A CDC doctor has warned this year’s “disastrous” flu shot may be responsible for the deadly flu epidemic sweeping the country.

“Some of the patients I’ve administered the flu shot to this year have died,” the doctor said, adding “I don’t care who you are, this scares the crap out of me.”
“We have seen people dying across the country of the flu, and one thing nearly all of them have in common is they got the flu shot.”

Scientists were worried this year’s flu season was going to be rough and their fears have been proven well founded. The flu season is off to a record-breaking start, with the CDC reporting widespread flu activity from coast to coast. Many health officials believe that 2018 will ultimately be the worst flu outbreak that we have experienced since 1918.

The CDC doctor’s experience of patients dying of the flu after receiving the flu shot is sadly not uncommon. Eight Santa Barbara County residents have died from the flu in the last fortnight. Seven of them had the flu shot.

This deadly pattern is replicating itself across the country. Yet health officials

Doctor: This Method Destroys Toenail Fungus (It Works!)

are still telling people to get the flu shot, even though it does not work well this season. Health officials have started admitting that the vaccine is only 10% effective.

The verdict is out on flu shots. Many medical experts now agree it is more important to protect yourself and your family from the flu vaccine than the flu itself.
Every year the pharmaceutical industry, medical experts and the mainstream media work hard to convince us to get vaccinated against the flu. 2018 is no different. But, as usual, we're not being told the whole story.

Pharmaceutical companies provide mainstream media outlets with a huge percentage of their advertising revenue. Big pharmaceutical companies actually spend far more on advertising than research. We are talking hundreds of billions of dollars.

Big Pharma’s dollars have effectively purchased the silence of mainstream media. You can no longer believe anything they say about pharmaceuticals, especially vaccines.

It is clear Big Pharma is desperate to ensure mainstream media outlets never tell us about adverse reactions or the toxic chemicals being injected into us in the flu shot.

**Flu vaccines contain dangerous ingredients**

The pharmaceutical industry, medical experts and the mainstream media admit to us that flu vaccines contain strains of the flu virus. What they are less likely to reveal though is the long list of other ingredients that come with the vaccine.
It is now a known fact that flu vaccines contain mercury, a heavy metal known to be hazardous for human health. Mercury toxicity can cause depression, memory loss, cardiovascular diseases, respiratory problems, ADD, oral health problems, digestive imbalances and other serious health issues.

The flu vaccines actually do not immunize but sensitize the body against the virus

Have you ever noticed how vaccinated children get sick almost immediately following a vaccination?

This is because the flu virus is introduced into their bodies. So rather than immunize, the flu shot actually only sensitzes the body against the virus.

And the fact that it causes individuals to get ill following a shot indicates immuno-suppression (i.e. lowering of the immunity).

Makes you more susceptible to pneumonia and other contagious diseases

For someone with an already suppressed immune system, injecting strains of the flu virus can have devastating consequences.

If your body is already working to fight off a virus or simply operating with
low immunity, a vaccine injection could put your body in serious danger of contracting influenza with stronger symptoms, or even worse pneumonia and other contagious diseases.

**Weakens immunological responses**

There have been literally thousands of medical journal articles published that show injecting vaccines can lead to harmful immunological responses and a host of other infections. Moreover, weak immunological responses only decrease a person’s ability to fight the diseases that the vaccine was supposed to protect against in the first place.

**Serious neurological disorders**

Evidence now suggests that ingredients in flu vaccinations can actually cause serious neurological disorders. In 1976 a significant number of those who received the flu vaccine acquired Guillain-Barré Syndrome (GBS), a disorder characterized by permanent nerve damage and even paralysis.

Flu vaccines can contain many harmful materials including detergent, mercury, formaldehyde, and strains of live flu virus.

Should you get a flu shot? If you are still prevaricating, and wondering who to trust, consider this:
The very people pushing flu vaccinations, and putting the fear of God into anybody who abstains, are making billions of dollars each year.

Are they the people we should be trusting with our health?

In August 1999, the Committee on Government Reform initiated an investigation into Federal vaccine policy. This investigation focused on possible conflicts of interest on the part of the Food and Drug Administration (FDA) and the Centers for Disease Control and Prevention (CDC).

The investigation concluded that many individuals serving on two key advisory committees had financial ties to the pharmaceutical companies that manufacture vaccines.

Often, these individuals were granted waivers to fully participate in the discussions that led to recommendations on vaccine licensing and adding vaccines to the Childhood Immunization Schedule.

This in itself creates serious doubt as to how effective flu vaccines really are.
